GAPP MODIFIER
CHANGE

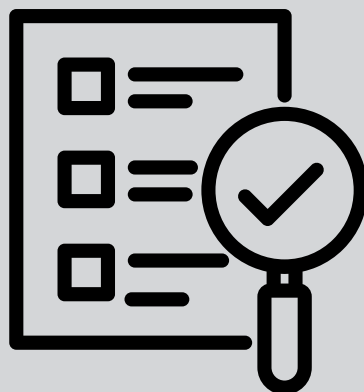

GEOH.APP

AS OF JANUARY 1st, 2025

GAPP Providers who use the family care option for Personal Support Services must include the U2 modifier in certain visit types or you will see denied claims!

This will mainly affect visits that use the service code S9122.

Much like if you provided CCSP services with the T1019 service code. You may either have the TF modifier or no modifier.

WHAT TO LOOK OUT FOR!

Authorizations haven't been updated to include the U2 modifier yet for this waiver program.

This means that if you were to input the U2 modifier right now, you won't be able to release the visits in Tellus because there's a matching authorization.

HOWEVER it is advised that you add them to prevent denied claims down the line.

TIPS FOR ADDING THE U2 MODIFIER

- Be sure to add the U2 modifier into your EVV vendor as visits must transmit to Tellus with them to be in compliance.
- The billable amount for this visit type will remain the same.
